

# REMOTE ACCESS PORTAL

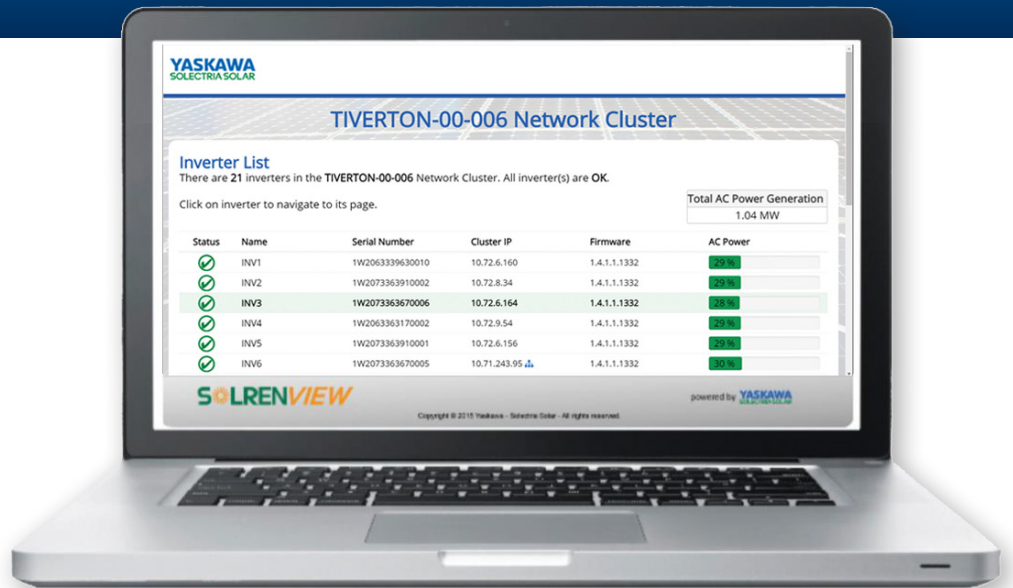

## FOR SOLECTRIA® XGI INVERTERS

### FEATURES

- Real-time access and control for all XGI inverters
- Remote diagnostics
- Power to control inverters as if one was physically on site
- Full encryption and authentication ensures the highest level of cybersecurity
- Admin rights to create, edit and maintain users
- Provide access to individual devices, clusters or an entire fleet based on user profile
- Unlimited number of users
- No additional hardware required
- Compatible with third-party monitoring solutions

### BENEFITS

- Reduce/prevent truck rolls
- Restart inverters, reset error codes
- Update firmware
- Change settings
- Perform deep-dive diagnostics without being on site
- Perform remote monitoring and commissioning

## Yaskawa Solectria Solar is pleased to introduce the new Remote Access Portal (RAP) exclusively for SOLECTRIA XGI Inverters.

The RAP ushers in the next generation of PV inverter control, allowing users to keep the service trucks in the garage, while performing firmware updates, diagnostics, and setting changes from the comfort of their office.

The RAP empowers users with full control of the entire fleet of SOLECTRIA XGI inverters with no additional hardware required. No longer is it necessary to call a monitoring provider to set up users, change passwords, or implement other administrative controls.

With the Solectria RAP, users have complete control over their organization's user management. Once users experience the power provided by the Solectria RAP, commissioning, owning, and operating PV plants will never be the same.
